6. (original) The method of claim 1 wherein the web page comprises a plurality of images, and wherein the presenting step further comprises:
in response to user selection of at least one image of the plurality of images, presenting the selected image in an editing interface for modification by the user.
 7. (currently amended) The method of claim 1 wherein the web page comprises of plurality of images and wherein the ~~opening~~presenting step further comprises:
in response to user selection of a sub-set of the plurality of images, presenting each image of the selected sub-set in an editing interface for modification by the user.
 8. (original) The method of claim 1, further comprising saving the modified image as a modified source file on the remote computer.
 9. (original) The method of claim 8, further comprising:
determining whether the user has write access on the remote computer; and
if the user is determined to have write access, saving the modified image as a modified image file on the remote computer.
 10. (original) The method of claim 1, further comprising giving the user the option to open the web page in the editing interface.
 11. (original) A computer-readable medium having stored thereon computer-executable instructions for performing the steps of claim 1.

In re Application of: Cover et al.
Serial Number: 09/599,999

12. (original) A computer-readable medium having stored thereon computer-executable instructions for performing the steps of claim 6.
13. (original) A computer-readable medium having stored thereon computer-executable instructions for performing the steps of claim 9.
14. (currently amended) A method of modifying an image on a web page, the method comprising:
downloading a mark-up language document defining the web page;
downloading a source file of the image, wherein the source file is referenced in the mark-up language document;
displaying the web page and the image ~~on a user~~in a web-browser interface according to the definition of the mark-up language document;
changing the appearance of the image as displayed on the ~~user~~web-browser interface in response to a user's selection of the image; and
opening the source file of the image directly from the web-browser interface in an editing interface for modification by the user.
15. (currently amended) The method of claim 14 further comprising:
detecting the location of the cursor on the ~~user~~web-browser interface; and
changing the appearance of the image when the cursor is over at least part of the image, thereby distinguishing the image from the rest of the web page.

- A1
16. (original) The method of claim 14 wherein the web page comprises a plurality of images and wherein the changing step further comprises highlighting at least one of the plurality of images in response to a user's selection thereof.
 17. (original) The method of claim 14 wherein the web page comprises a plurality of images and wherein the changing step further comprises, in response to a user's selection of a sub-set of the plurality of images, opening a source file for each image of the selected sub-set in an editing interface for modification by the user.
 18. (original) A computer-readable medium having stored thereon computer-executable instructions for performing the steps of claim 14.
 19. (original) A computer-readable medium having stored thereon computer-executable instructions for performing the steps of claim 15.
 20. (original) A computer-readable medium having stored thereon computer-executable instructions for performing the steps of claim 16.
 21. (original) A computer-readable medium having stored thereon computer-executable instructions for performing the steps of claim 17.
 22. (currently amended) A system for modifying an image of a web page, the system comprising:
a means for communicating with a remote computer using at least one Internet protocol;
a means for downloading a web page from the remote computer;

a means for displaying the web page to a user in a web-browsing interface;
a means for selecting the image of the displayed web page; and
a means for editing the selected image directly from the web-browsing interface in
response to the user selecting the image with the selecting means.

- AI
23. (original) The system of claim 22 wherein the communicating means is a TCP/IP stack.
 24. (original) The system of claim 22 wherein the communicating means is a socket.
 25. (original) The system of claim 22 wherein the downloading means is a web browser in cooperating with the communicating means.
 26. (canceled)
 27. (original) The system of claim 22 wherein the selecting means is a border graphic drawn around the image in response to the user clicking on the image with a mouse.
 28. (original) The system of claim 22 wherein the editing means is a graphic editing program.
 29. (original) The system of claim 22, further comprising a means for saving a source file of the modified image to the remote computer.
